Potential competing interests: No potential competing interests to declare.

The consensus opinion of all the reviewers is that there is no justifiable scientific reason to split light or a single photon velocity into two components, as proposed by the author. The v2 of this manuscript has presented nothing new to alter my opinion.

That electromagnetic waves exhibit also particle-like property or different color light carrying different power does not justify the two-components treatment.

Too much emphasis is given to the undergraduate physics textbooks as reference. What is presented is unlikely to have any new application, as claimed.

This manuscript, v2, is still not suitable for publication.
