# Review of: "Determining Affinity of Social Network using Graph Semirings"

Khadija Touya

The presented paper entitled: "Determining Affinity of Social Network using Graph Semirings" seems to be a good contribution concerning the social networks domain. However, there are many points of weakness authors should fix to continue the publishing process.

1- The proposed method isn't clear enough to be understood, there is no motivation to consider the work authors made and the principal word "Semirings' is not explained in any part of the article.

2- Authors must mention a reference, in the introduction, when they affirmed that the graph theory is the favorable platform...

3- the method presented in this paper is limited to Facebook friendship networks. What about other social network platforms?

4- There is no conclusion describing the outcome of the work established by the authors.

Decision: Accept with major revisions to be published.
