Potential competing interests: No potential competing interests to declare.

This manuscript addresses the challenges posed by rapid urban growth and increased sand demand, leading to marine dredging in Morocco's Larache coastal area. It aims to examine dredging's consequences on the marine ecosystem and propose practical measures to mitigate negative impacts, contributing to sustainable coastal resource management.

Several inputs to this manuscript:

1. The authors should build a deep analysis in the introduction section. It should have more citations. I did not see the importance of this manuscript in the introduction.
2. Figures 1 and 2 are too old. Create new ones.
3. Figure 3 is not clear.

Overall, the manuscript should be restructured and given a smooth flow.
