## Comments to the author

Though the manuscript seems to be good in terms of topic, it contains many flaws:

**First**, the whole manuscript is not well-organized and it should be revised in terms of format and content.

**Second**, an introduction to the study should be provided for the manuscript.

**Third**, the research gap and main contribution of the study are still not clear.

**Fourth**, the report of the results and discussion is confusing.

**Fifth**, the researcher did not explicitly explain his intervention treatment in the manuscript.

**Sixth**, the researcher did not have any statement about the implications of the study and the theoretical and pedagogical implications of the study.

**Seventh**, some comments are also given in the main text for the author. The researcher is recommended to observe and apply them within the manuscript.

**Eighth**, the report of the results and discussion is to some extent confusing.

**Last but not least**, the overall design of the manuscript is poor which has a negative effect on the clarity and quality of the presented content.
