Potential competing interests: No potential competing interests to declare.

Author organized the paper well, but some data needs to concentrate to improve the quality of the paper.

1. Author needs to explain the data set and number of features considered.
2. For model training, what is the ratio of the dataset that was considered by the author? Can you explain in detail?
3. The objective of the proposed work is given in the form of bullet symbols, which will increase readability and accuracy.
4. How did the author select the cluster size?
5. Future enhancements of the proposed work are not clear.
