While this article gives useful insights to multiple teaching patterns within technological curriculum and hence can help enable educators to improve the learning experience in today's digital world, I do feel that it looks more of a review and lacks structure hence I have a few suggestion for the author:

1. Strengthen the composition of your article by having an in-depth literature review of evidence-based studies and maybe conducting a descriptive or analytical study of your own.
2. There is a mention that of analysis of books and websites, but it doesn't provide specific citations or references to these sources. Including citations would lend credibility to the patterns.
3. A comparative study may assist readers in making informed decisions about which method is more suitable to their needs.
4. Addition of a detailed discussion, as well as a clear and concise conclusion of the implications of understanding these teaching patterns for the readers.
