Potential competing interests: No potential competing interests to declare.

Dear author,

Thank you for inviting me to review this manuscript.

The document provides a thorough and well-structured analysis of disease transmission in healthcare environments. It effectively combines detailed descriptions of transmission mechanisms with practical solutions and highlights the essential role of government in infection control. The recommendations are evidence-based and align well with current best practices in infection prevention.

Suggested Improvements

1. **Detailed Case Studies:** Including specific case studies or examples of successful infection control implementations in various settings could enhance the practical applicability of the recommendations.
2. **Visual Aids:** The use of diagrams or flowcharts to illustrate transmission pathways and preventive measures could improve the document's readability and comprehension.
3. **Stakeholder Involvement:** Expanding on the roles of different healthcare stakeholders (e.g., administrators, frontline workers) in infection control could provide a more holistic view of the strategies needed.

This review aims to provide a comprehensive evaluation of the document and suggest areas for further enhancement to ensure it serves as a valuable resource in the ongoing efforts to mitigate disease transmission in healthcare settings.

Thank you, kind regards.
