

Review of: "A Description of the Melting of Ice With the Modified Clapeyron–Clausius Equation"

M. H.T. Alshbool¹

¹ Zayed University

Potential competing interests: No potential competing interests to declare.

- 1- In general, a good paper, he needs to add some parts to the literature review.
- 2- The author should write and explain more about the Clapeyron–Clausius Equation.
- 3- He can add a section named "Results and Discussion" to present all numerical results with some graphs.

My decision is to accept if he does my comments.
