The author presents a mini review of bacterial sinusitis. The topic is interesting as well as the objectives set.

However, the development is very superficial, particularly the microbial etiology is very poorly described. Something similar with antimicrobial treatment and the issue of antimicrobial resistance. The other topics addressed, in my opinion, should be expanded so that this article is a contribution to the medical team. The bibliography (list and format) must also be reviewed; the citations do not correspond to those referenced in the text.
