

# Review of: "COVID-19: Health risk factors among students' population in Albania"

Noon Kamil

Potential competing interests: No potential competing interests to declare.

The article is addressing an important area. I have the following comments:

- The title is general and not specific on mental health as the article.
- The title and the Materials and methods indicated that the study focus on university and college students in Albania. However, the actual sample was from university of Tirana only. Please indicate that in the title and materials and methods.
- Comment on the sample size calculated from the total number of students in the university.
- comment on the study limitations.
- some editing errors: COVID19 and sometimes Covid19. please unify. Use passive voice in the writing "As I mentioned" in paragraph 6 of Results and discussion.
-
