

Review of: "Skin related health issues among health care workers due to utilizing of personal protective equipment during COVID-19 pandemic in Pakistan"

Muneeb Ullah

Potential competing interests: The author(s) declared that no potential competing interests exist.

It is a very good topic and requires evidence based recommendations and documented results. Less focus is given in Pakistan especially to this aspect.

Overall it fits the current situation of pandemic and need for research on this topic.

The number of study participants is less. It would have been more comprehensive if it had been done as a multi-center study.

Grammatical errors need correction.

Discussion needs to be more elaborate and Conclusions should be more specific.

Also its relation to current practices with decreasing COVID-19 infection numbers should be discussed (with respect to Pakistan).
