Dear Madam,

My congratulations on your paper. I have the following comments

1. Since my review is belated, most of my comments have been addressed.
2. It would be very informative if, NEP (national education policy-2020) can be dealt on and the freedom NEP will provide for inculcation of smart city design in curriculum.
3. A short correlation will be helpful for educationalist to take the idea forward, since design of smart cities is a multi disciplinary approach and many areas of research have to synchronize. doing this this paper will penetrate into educationalist working on sustainability. This can be the futuristic part of the paper.
4. The paper is of real importance, since regions with high populations are very vulnerable to rapid spread of viral outbreaks.

thank you and best wishes
