Potential competing interests: No potential competing interests to declare.

In this, Figure 2 is not structured. Also, there is no evidence to support the research or the blockchain-based technology. The architecture is there but still requires a mathematical model to design the expected outcome. Also, no comparative tables are there, no discussion and result section, and no methodology section in this report.

So, in this, few corrections are required, such as:

- Can you specify what improvements are needed for Figure 2 to enhance clarity?
- What specific evidence or data could strengthen the claims about blockchain technology in the article?
- What specific elements should be included in the methodology section to improve the article?
- How can the article better demonstrate the effectiveness of the proposed system compared to existing solutions?
