# Sibrotuzumab

National Cancer Institute

## Source

National Cancer Institute. *Sibrotuzumab*. NCI Thesaurus. Code C156438.

A humanized monoclonal antibody (MoAb) against human fibroblast activation protein (FAP). FAP is a 95 kDa cell surface glycoprotein and an inducible tumor stromal antigen of epithelial cancers and of a subset of soft tissue sarcomas. FAP shows a very limited distribution pattern in normal tissues, thereby sibrotuzumab has possible diagnostic and therapeutic applications in epithelial cancers.
