Potential competing interests: No potential competing interests to declare.

1. Introduction

- The second paragraph, line 10, delete the following phrase “ To the best of the author’s knowledge, this feature has not been exploited before for such expansions”

3.1

- Delete equations 39, 41, and 43 and just refer to them.
- Why, in Figure 1, did all the cases not converge even though the series cutoff was at $n=6$?
- Why was a comprehensive theory of approximation not presented and not just in two cases?
- Why was the amount of truncation error not studied for this proposed series?
