After reviewing the manuscript entitled "Inhibiting Efflux Pumps and Resistance Mechanisms: A Mini Review," I noticed a lack of use of scientific writing, the review is of great importance given the current moment of worldwide emergence of antimicrobial resistance.

The text is a review of efflux pump inhibitors and there is a lack of explanation about the pumps, their types, substrates, etc. There is also little explanation about inhibitors and their mechanisms of action.

There is also a lack of figures and tables that would improve reading.

I would not recommend publishing this manuscript without reviewing the writing.
