Potential competing interests: No potential competing interests to declare.

It is a sum up article that provides basic overview. However, it fails to present the method of the research, research question and objectives of the study. Thus it is hard to evaluate the contribution made by the author. The author presents opinion of some standard authors on the topic, however, does not presents any new observations or discussion.

I suggest to focus on qualitative or quantitative method of research in this case. In longitudinal evaluation of the research it might show some interesting outcomes.
