Potential competing interests: No potential competing interests to declare.

This study, which evaluates the impact of critical thinking in the academic field through the performances of educators and students, points to an important issue in terms of the inclusion of alternative thinking skills in education. In this context, the evaluation, determination, and recommendations in the conclusion of the study question the possibilities of an effective transformation for the field. In addition, the literature section of the study could be improved. What are the similar studies conducted before? What is the main feature that distinguishes this research from others? Putting this forward will emphasise the literature view of the field and the importance of this study in the field. I congratulate the author for his research and thank him for his contribution to the field.
