An interesting research note solved an important question in a simple method. However, I still want to make some suggestions.

1. Make the title and abstract more concise.
2. Edit the text in the picture to make it more suitable (Figs 1, 2, and 3). The size of the latitude and longitude labels needs to be changed (Figs 5, 6, 7, 9, 10, 11, 13, 14, and 15).
3. More detailed introduction to the method. References to related data or methods should be cited.
4. Statistical diagrams. In addition to maps, statistical diagrams can also be used to show the changes between the two periods, which may be more intuitive for the reader.

Wish you all the best.
