

Review of: "Revitalizing Key Conditions and Integrated Watershed Management Approach to Sustain Water Availability and Agriculture in Semi-Arid Regions"

Yashwant B. Katpatal

Potential competing interests: No potential competing interests to declare.

The article covers an important area of research. Water management in drylands is a challenge. Institutional inputs are necessary. The characteristics and challenges of water availability and agriculture in drylands mentioned in the paper provides a good overview of the key factors that contribute to the challenges faced by farmers in semi-arid regions. The authors in future may consider providing more scientific information on geomorphological characteristics and soil characteristics which affect the water availability especially in the drylands.
