**Potential competing interests:** No potential competing interests to declare.

The authors designed a low-cost smart walking aid for visually impaired and blind people. The device will support the movement of visually impaired and blind people. The aim of the study was clearly stated. Related studies were well reviewed by the authors. While the methodology was clear. However, they ought to have included the block diagram of schematic of the device. The should also have discussed more extensively the implication of the results. They should have numbered their equations and ensured that each equation is on a separate line. The paper is of good quality and should be accepted for publication.
