This is a very interesting paper. I suggested the acceptance of this paper in Qeios with some minor revision

Comment 1: line 11 of introduction section: it is suggested to change according bellow "Nanoparticles of diameters ranging from 0 to 100 nm, including inorganic nanomaterials, micelles, polymer nanoparticles, and lipid based nanoparticles" References: (<https://doi.org/10.1016/j.cis.2022.102833>)(<https://doi.org/10.1080/10408398.2023.2170318>)

(DOI: 10.1002/fsn3.3387)

(<https://doi.org/10.1016/j.ijbiomac.2023.128501>)

Comment 2: In the section "Potential Nanocarriers Approaches": in second line, please remove the first nanoemulsion. According to this "Exciting techniques include mucoadhesive polymers, microspheres, nanoparticles, and nanoemulsion"

Comment 3: Please add the related reference (s) for table 1, 2, and 3.

Comment 4: Please summarize the conclusion section. It is too long.
