Potential competing interests: No potential competing interests to declare.

The research article is considerable and informative. The authors must improve the substance and form— to make it coherent and systematic since this is a scholarly work.

I suggest the following:

In the Abstract, I propose this format: (1) introductory statement highlighting the importance of the study; (2) state the research problem; (3) indicate the research question; (4) briefly disclose the conceptual framework and methods; (5) concisely enumerate the notable findings; (6) manifest the central conclusion.

The Introduction and Literature Review: In the later part, please clarify the research problem by identifying the gaps in the literature and explaining the connection to the research question. The author needs to engage the scholarly works, explain how you will supplement the existing publications, and decidedly demonstrate why you are doing that.

The Conceptual Framework of Political Ecology: in the end part, please explain the connection between the conceptual framework and the research question and justify their relationship.

The Materials and Methods: Please explain the materials and the connection to the research problem. Also, please show the link to the research question with the methods.

The Conclusion and Implications are absent, so I suggest the following format: (1) briefly summarize the essential findings and tie them up to the research question and the research problem of the study; (2) elaborately explain the contribution and the broader implications; (3) delineate the recommendations for future research.
