The manuscript is fine for the data and scientific-based knowledge. However, too strong the paper, the serious point of this manuscript needs to concern.

I recommend this article after making the following minor corrections.

-The title is concise and appropriately summarizes the paper's substance. The objectives and main conclusions of the paper are briefly

summarized in the abstract. It effectively highlights the importance of the research. To further inform potential readers of what to expect, it would be advantageous to incorporate the key findings or insights from the review in the abstract.

1. The introduction part is acceptable, but it would be good to highlight the limitations of previous studies and how your study can help to bridge the research gap.

2. Do these effects of The Phytochemical Richness of Fresh Musa Paradisiaca L. (Plantain) Stem Juice and Its Anticonvulsant affect the digestive system in mammals? Or are they terminated from one generation to the next?

3. It would be good to break some long sentences into a few short sentences, as this will be less confusing and improve readability.

4. Minor English grammatical errors are observed throughout the manuscript, which can be rectified.

5. The conclusion of the work does not fix the main point of the study; try to rewrite and point to the significant findings of the current study.
