The authors conducted a study on the management of information communication technology in an organization. The authors have put a great effort in conducting the study. However, there are some issues that needs to be addressed for the paper to be fit for publication.

1. The objectives of the study is not in anywhere mentioned in the introduction
2. What motivates the authors to conduct this study?
3. What inference does the author draw from the articles that passes the inclusion criteria?
4. The structure of the paper is very poor. It is very difficult to differentiate between sections and subsections.
