

Review of: "Teaching Method Preference by College Teachers in India"

Francisco J. Pozuelos-Estrada¹

¹ Universidad de Huelva

Potential competing interests: No potential competing interests to declare.

The literature review is too superficial, with no reference to previous and complementary work.

It is necessary to substantiate the study both in the research design and in the contributions and conclusions.

The results and their interpretation are superficial.

The data should be organized in tables and graphs.

I think it is a draft that needs more theoretical support and other studies.
