

# Review of: "Aquaponics Unveiled: Efficient Household Farming"

Julio Ricardo Galindo-Pacheco

**Potential competing interests:** No potential competing interests to declare.

While this introductory paper provides a basic overview of aquaponic systems, it falls short of providing the in-depth information necessary to successfully implement such a system. The paper would benefit from a more focused approach, delving into the specific requirements of one or two aquaponic species in greater detail. Additionally, the use of complex terminology in the abstract could alienate novice readers.
