# Achromobacter ruhlandii

National Cancer Institute

## Source

National Cancer Institute. *Achromobacter ruhlandii*. NCI Thesaurus. Code C119307.

A species of Gram-negative, non-fermentative, non-hemolytic, and non-halophilic, non-spore forming rod-shaped bacteria, in the phylum Proteobacteria. This species is catalase- and oxidase-positive, urease-, phenylalanine-, deaminase-, and DNase-negative, reduces nitrate to nitrite, assimilates glucose, and does not hydrolyze esculin, gelatin and starch. *A. ruhlandii* is commonly found in soil.
