Congenital Cystic Adenomatoid Malformation of the Lung

National Cancer Institute

Source

National Cancer Institute. *Congenital Cystic Adenomatoid Malformation of the Lung*. NCI Thesaurus. Code C98892.

A congenital malformation that is present in the lungs of the newborn. It is characterized by a spectrum of lesions that range from single or multiple cysts to bulky overgrowth of bronchiole-like structures. Signs and symptoms include respiratory distress, recurrent pulmonary infections, dyspnea, and failure to thrive.
