Potential competing interests: No potential competing interests to declare.

The present review article entitled "Exploring the Significance and Medicinal Potential of *Rubus fraxinifolius*: A Review of Ragimot Wildberry" is designed to explore the phytochemical enrichment and potential medicinal benefits of *Rubus fraxinifolius*. However, a few points are to be taken into consideration to enrich it with more factual information in line with the topic. My comments have been listed below:

Major comments:

1. In the "Abstract," the actual health benefits of *Rubus fraxinifolius* are lacking. Hence, the author is requested to enrich the abstract at the "results" part more with the medicinal potentials of this berry.
2. Instead of writing "Functional properties," the Author is requested to write "Medicinal properties."
3. Please write the "Efforts on cultivation" section before the "Nutritional Composition" section.
4. In addition to "Table 1," please add "Table 2," mentioning all "medicinal importance" such as anti-aging, antibacterial, etc., as well as "molecular targets" such as anti-oxidant, anti-inflammatory action, etc.
5. Please add a Table (i.e., New Table 1) describing the "Taxonomic description of *Rubus fraxinifolius*" mentioning the Division, Order, Suborder, Family, Subfamily, Tribe, Genus, and Species.
6. In Figure-2, instead of showing only the fruit, please show the tree in whole with a zoom image of the fruits, flowers, and leaves.

Thanks,
