Potential competing interests: No potential competing interests to declare.

Title: Patient confidentiality is necessary. Kindly remove hospital name. You can include geographical region instead.

Abstract: well written and structured.

Introduction: kindly look into these corrections - according to suggestions

It is the fastest-growing vascular disorder : It is the fastest-growing cardiovascular disorder; Brief explanation of what is mixed-effect modeling

Materials and methods

Data source, study setting and study design - why was this specific duration chosen January 2016 to December 2019?

New York Heart Association classes: briefly explain the stages used for this study.

Explanatory variables: It is necessary to determine why the following parameters were chosen specifically in relation to CHF?

What are any exclusion criteria?

Ethical considerations: if patient was unfit for consent, what protocol was followed?

OVERALL COMMENT:

Dear author.

It's a good attempt for the article, but the idea of this article remains unclear. Is the basis of this research to analyze MAP in CHF patients or to establish a statistical model for the given scenario? Both ideas are good provided you can establish a detailed explanation of the knowledge gap, procedural details and application of this knowledge.

Kindly consider suggestion and do the needful.

Regards
