Ras Association Domain-Containing Protein 7

National Cancer Institute

Source

National Cancer Institute. *Ras Association Domain-Containing Protein 7*. NCI Thesaurus. Code C158519.

Ras association domain-containing protein 7 (373 aa, ~40 kDa) is encoded by the human RASSF7 gene. This protein plays a role in the inhibiting the activation of c-Jun N-terminal kinases (JNK) by dual specificity mitogen-activated protein kinase kinase 7 (MAP2K7), which prevents JNK-dependent apoptosis.
