This is a good commentary on Polymerized Type I Collagen (Fibroquel) as a treatment for COVID-19, Mexican experience. It can be accepted for publication after minor revision taking following points:

1. Drug repurposing is the main solution to combat COVID-19 as there is no specific antiviral developed till date against COVID-19 [**Combinatorial Chemistry & High Throughput Screening**, 2021; 24(7):1055-1068]. The Fibroquel has been repurposed against COVID-19 in Mexico. This point should be added with given citation.
2. What is the other country clinical report for the same? It should be explained with citation.
