INHBA wt Allele

National Cancer Institute

Source

National Cancer Institute. *INHBA wt Allele*. NCI Thesaurus. Code C52047.

Human INHBA wild-type allele is located within 7p15-p13 and is approximately 11 kb in length. This allele, which encodes inhibin beta A chain protein, plays a role in the inhibition of follitropin secretion in the pituitary gland and is involved in the regulation of diverse cellular functions.
