**Potential competing interests:** The author(s) declared that no potential competing interests exist.

I agree with a previous reviewer that this is not a scientific article, it is more of an instruction to develop an ontology that could be used as instructions for a course paper in a masters' level course. The text is highly descriptive and lacks an in-depth analysis of the philosophical and theoretical underpinnings of creating ontological definitions that is needed in order to publish an article that contributes to advance a research field.
