Review of: "Artificial Intelligence and Digital Technologies in the Future Education"

Antonio Manuel Liz Gutiérrez[1]

1 University of La Laguna

The article has sufficient scientific quality to be published. The information it offers is relevant although sometimes it is not very original. I highly recommend including references and analyses on the recent release of ChatGPT, and similar systems. An essential book, which deals with many questions about education, is Reid Hoffman's *Impromtu. Amplifying our humanity through AI* (2023, free download).
