**Potential competing interests:** No potential competing interests to declare.

The article deals with an interesting topic, thank you for giving me the opportunity to review it, I would like to suggest a few points:

In the introduction, some sentences are without reference, please revise

Also, the comparison with previous studies and the study gap has not been done

In the working method, the entry and exit criteria should be stated separately and the details of the participants' characteristics should be mentioned

The results are well expressed, however, the number of tables is large, it is better to merge them if possible

Summarize or delete diagrams if they overlap with tables or text

In the discussion, it is better to include a section to examine the health consequences related to the topic

Although the article examines an interesting topic, this review can be biased, I think you should talk about disambiguation in a paragraph and that there was no interference from the tobacco industry because it calls the results into question.
