Potential competing interests: No potential competing interests to declare.

Please mention the reason for using NaOH and why only 20% is presented, and why treatment is carried out for only 3 hrs....?

Update the literature with recent papers.

What was the procedure to select 20mm and 30mm chopped fibers while preparing the composites?

Figure 7 is not clear. Please update it with a high-quality image

Please mention the duration of the water absorption test.

What is the reason for getting a very low impact value for sample 2, though it has the same composition? Please add justification for this.

Table 2 and figure 5 are having some discrepancies (number of days in table and graph are different). Please check and update the same.

The explanation part for figure 10 is very generous. Please make it more informative by adding a few more technical points.
