The work is like a journalism report, not considered as a scientific report. However, it's good to present information about the negative impact of methamphetamine and the "Yaba" crisis in Bangladesh. I suggest the author write the English or widely used name for "Yaba." I also agree with other peers who mentioned that to improve the current study, it would be beneficial to offer additional context by establishing a connection between methamphetamine use in Bangladesh and its global status. Furthermore, providing specific policy recommendations and ensuring the incorporation of the most recent information on the subject would enhance the study's comprehensiveness and relevance.
