The article "Using the Socio-ecological Model to Examine Prevalence and Demographic Correlates of Alcoholic Beverage Consumption among Adolescents in Public Schools in Uganda" sets out to apply a socio-ecological model to explore gender, religious affiliation, form or class of study, social media use, friendships, and involvement in places of entertainment as possible predictors of alcohol consumption. It is found that, gender and religion were significantly associated with alcohol consumption.

In my opinion this paper deals with an interesting problem and seems to be technically correct. So, I believe it is ready for publication in the present form.
