Potential competing interests: No potential competing interests to declare.

The following comments are required to improve the quality of the paper:

- 1- The section of methods should contain more explanations about the classification method used in the work (Fig. 2 refers to the classification stage).
- 2- Fig. 3 should be after subsection 2.5, Feature Extraction Algorithms, directly, not after subsection (2.6, Data Analysis), while Fig. 2 should be at the end of section (2. Methods).
- 3- Improve the introduction by discussing the related work.
- 4- Improve the conclusion part based on the information in the discussions part.
