Thank you for the opportunity to review this article, Healthcare Systems Moving Toward Data Governance-Centered Model: India's G20 Presidency in the Wake of COVID. I found that it is a very interesting in term of how the pandemic has changed how the healthcare has been moving digitally. And recently, we are overwhelmed by the abundance of digital technology has come to our daily life. The author has showed the example of India's government initiatives in a comprehensive and thorough fashion. However, there are several issues that from my opinion can help to increase understanding of those initiatives.

1. It is not clear what has happened among all the stakeholder of India's health care providers, not only the government office, but more importantly is the front line of health care facility's provider, since the emergence of digital health technology during and after the pandemic.
2. it is also unclear of what happen after the establishment of the National Digital Health Mission. Giving details of what has been happening afterwards is very helpful to give more understanding to the readers.
3. the conclusions should not give any new knowledge "With an estimated market of INR 47.04 billion by 2025, growing at a compound annual growth rate of 20.49 per cent, ..", instead it should be put in the main text.

I believe this article merits a publication, most likely as a general commentary or perspective. Again, thank you for the opportunity to review.
