Potential competing interests: No potential competing interests to declare.

This article draws attention to a serious field of research, however, there are several loopholes and further in depth survey is required regarding the same.

1. Abstract needs to be structured properly. There is lack of clarity on thoughts and flow of work.
2. The methodology is not complete. Details on scales and their adoption, checking reliability and validity of scale items have not been mentioned.
3. The discussion is not scientifically linked and properly cited.
4. The implications and recommendations of study needs to be highlighted.
5. Sample size and the basis of the same has not been justified.
