Cushing syndrome due to macronodular adrenal hyperplasia

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Cushing syndrome due to macronodular adrenal hyperplasia. ORPHA:189427*

ACTH-independent macronodular adrenal hyperplasia (AIMAH) is a rare cause of Cushing syndrome (CS; see this term) characterized by nodular enlargement of both adrenal glands (multiple nodules above 1 cm in diameter) that produce excess cortisol and features of adrenocorticotrophic hormone (ACTH) independent CS (see this term).
