Review of: "Deep Learning in Medical Image Registration: Introduction and Survey"

Lazer Arokia Jesu Prabhu[1]

1 CMR Institute of Technology

Potential competing interests: The paper looks interesting and evident. Over all formation of paper is good and can be accepted with following additions. 1, The Metrics discussed on measurement of different methods for Image Registration is not clear. 2, Try to imbibe of metrics which states which method works good for image registration from the earlier research 3, Elaborate on all the Statistical Charts presecribed.

1, The abstract part expresses the interest of survey but still it can be refined and adding with Section stating which method works better for Image Registration.

2, Authors are suggested to work on the metrics part a bit to show the methods are evident.

3, Check for the overall flow of information because it looks clumsy in certain sections of the paper.
