Hypertension is a significant health issue globally, including in Nigeria. Research focusing on the cost of treating hypertension is crucial for understanding the economic burden it places on individuals, healthcare systems, and society at large.

Conducting the research in a tertiary health facility in Yobe State, North-Eastern Nigeria, provides valuable insights into the challenges and realities faced in a specific region of the country. It may shed light on the unique socio-economic and healthcare infrastructure factors affecting hypertension treatment in that area.

The findings of the research can have significant policy implications for healthcare in Nigeria.

Overall, auditing the cost of treating hypertension in a tertiary health facility in Yobe State, North-Eastern Nigeria, is a commendable effort that contributes valuable knowledge to the field of healthcare economics and public health policy in Nigeria.
