Dear authors,

I have studied with great interest the manuscript «Unilateral Posterior Spinal Cord Ischemia due to a Floating Thrombus: a case Report».

The work presented a clinical case of posterior Spinal Cord Ischemia due to a floating thrombus in the ascending aorta.

The authors demonstrated a floating aortic thrombus in the ascending aorta likely responsible for a cervical posterior spinal cord infarction. The case are clearly exposed and well written. I have no comments and I suppose it may be publish in present form.
