Review of: "Sociodemographic, Clinical, and Psychological Barriers to Medication Compliance: The Case of Patients with Musculoskeletal Disorders in Greece"

Rita Chiaramonte¹

1. University of Catania, Italy

ABSTRACT: The **background** is unclear; explicitly state the type of patients affected. **AIM:** Specify which musculoskeletal disorders are being referred to. In the **Methods** section, avoid using acronyms like "FAS and SEAMS" without first defining them. In the **Results** section, for the "statistically significant effect of physical and mental fatigue," include the exact p-values.

INTRODUCTION: Consider streamlining the introduction for conciseness.

RESULTS: In the tables, include p-values for FAS.

DISCUSSION: Provide better contextualization with additional references. For instance, you can reference studies addressing factors influencing the onset and adherence to anti-osteoporosis therapies (DOI: 10.3390/jcm12010014).
