"A Methods Note on Remote Sensing Platforms and Large-Scale Archaeological Impact Assessments (AIA) in the Philippines" can be defined as an interesting proposal for methodological, theoretical and integrated application. But, as also pointed out by Dr. V. Rosato: "the work suffers from a lack of specificity (any technical detail aimed at providing a coherent and comprehensive view of the complementarity of different techniques)."

It is necessary to integrate the advancement of methods or technologies, explain their scope with experimental data and compare them with other technologies, such as GPR.
