Potential competing interests: No potential competing interests to declare.

Comment 1: The overall manuscript needs to be revised with the help of a native English speaker.

Comment 2: Mention it protocol paper instead of article as article has some mandatory sections below:

'Introduction', 'Method (as method section reflects analysis as well, so no need to mention analysis further)', 'Result (result is the mandatory part of an abstract. Discussion of the ethical section is not required in the abstract)', and 'Conclusion'

Comment 3: Line number is necessary, so a reviewer can clearly drop his/her statement according to line number.

Comment 4: 'Various formal and informal workstations in Dhaka City' is a vague term. You should mention at least the area and the name of hospital/healthcare centers.

Comment 5: What does it mean 'formal and informal sectors'?

Comment 6: This study has multiple study objectives. It should be mentioned as 'general' and 'specific'.

Comment 7: When and where pre-testing done? Mention it because pretesting should not be done in the same institute the main study will be conducted.

Comment 8: Overall writing and discussion parts need to revise.
